

All Business. All The Time.

SIP Trunking to Cisco Routers and Gateways

If your company is looking for...

- An alternative solution to the legacy and fixed-line circuits for voice communications
- One IP-based connection for both data and voice
- Less maintenance and more reliability
- Lower cost than traditional telephony
- More features and flexibility
- Ways to integrate existing systems with IP telephony

Ring 9 SIP Trunking is the answer for your business

- Connect through Cisco Routers and Gateways
- Acquire new service and increase access capacity in minutes, not days or weeks
- Integrate directly with Call Manager – no equipment necessary
- Terminate numbers from alternate locations at no additional charge
- Have access to full ANI delivery capabilities
- Reduce cost with cheap international rates
- Increase capacity through overflow to voicemail – no more busy signals
- Take advantage of painless and quick failover and redundancy plans

Include Ring 9 products in your business plan

Ring 9 provides businesses with a total communication solution that reduces costs, eliminates maintenance, handles growth, and facilitates collaboration between businesses and their customers, employees and partners, whether around the corner or around the world. Ring 9 products and services include:

- Hosted PBX
- Trunk Replacement
- SIP Trunking to Cisco Routers and Gateways
- Web Meeting
